

Cloud Security Assessment

K logix consultants will review the current configuration and, potentially, the overall cloud security maturity of an organization.

PROCESS:

Utilizing client's existing tools, K logix consultants will review the configuration of their cloud environment (AWS, Azure, GCP). K logix will review the configuration against best practices and industry standards as appropriate. K logix will also interview key stakeholders to understand the business drivers for specific configuration and how the cloud security posture aligns with the broader security posture. K logix may also include workshops to review the user configurations of select cloud services such as Salesforce. All findings will be delivered in an executive summary with concrete recommendations for improvement.

BENEFITS:

- Measurement against best practices for cloud security
- Recommendations for improvement in managing cloud infrastructure as well as key SaaS application security
- Guidance that takes into account the reality of business needs with regards to cloud infrastructure and security
