

Identity and Access Management Program Review

Identity and Access Management (IAM) is a top focus area for security program strategies and poses many complex challenges that come with a strong IAM approach. To help security teams overcome challenges related to IAM, K logix has developed an IAM Program Review service tailored to customer-specific starting points and desired outcomes. The goal is to improve maturity from a programmatic viewpoint.

K logix's team of security experts understand the importance of protecting your applications, data, and systems, while ensuring your IAM objectives meet the current and future goals of the business. We work with you to determine the effectiveness of your existing strategy, identifying areas of improvement, providing key recommendations, and bolstering the overall security maturity. Our results are always business-focused, helping you to justify your projects or investments, and giving you the ability to educate executives or the board on any IAM initiatives.

WHY IS THERE A FOCUS ON IAM?

- Investment in Digital Transformation
- Fast-paced Cloud Adoption
- Rising Complexity of Cyber Attacks

Benefits of K logix's IAM Advisory Service
